Innovation Leads to future

Project Description:

This project is Beijing's first P+R (Park and Ride) parking system. Located at the northwest corner of Beiyuan Station on the Batong Line of the Light Rail. Customers drive into the P+R parking system and exchange to Light Rail to their working place in the morning, and get back their cars after work. During the weekdays, this facility will provide parking and ride services for sub-urban residents to stop their cars here and continue with public transportation to reduce traffic pressure in the central urban area. This facility could also provide parking spaces for the surrounding area activities and reduce legal roadside parking during weekend and holidays.
